

Beyond Institutions: Personal Learning in a Networked World

London School of Economics (9th July, 2014)

Stephen Downes

The Right Model

What's the best model for learning ?

Existing models are failing

The pundits have their own models to propose

Designers are full of models

Technology is full of models

New versions of old models don't produce new results

maybe the 'right model' is to do away with the models altogether

Self-Organized Learning

What's missing is BAD

Personal vs Personalized

The *personal* isn't designed. It is based on self-organization

Watters: the future of ed tech is a reclamation project

Reclaimed learning is network learning

Network Learning - Building the MOOC

The distributed developer's stack

Interactions in a Problem Space

Connectivism as a learning theory

Elements of MOOC design

The learner at the centre of the networked world

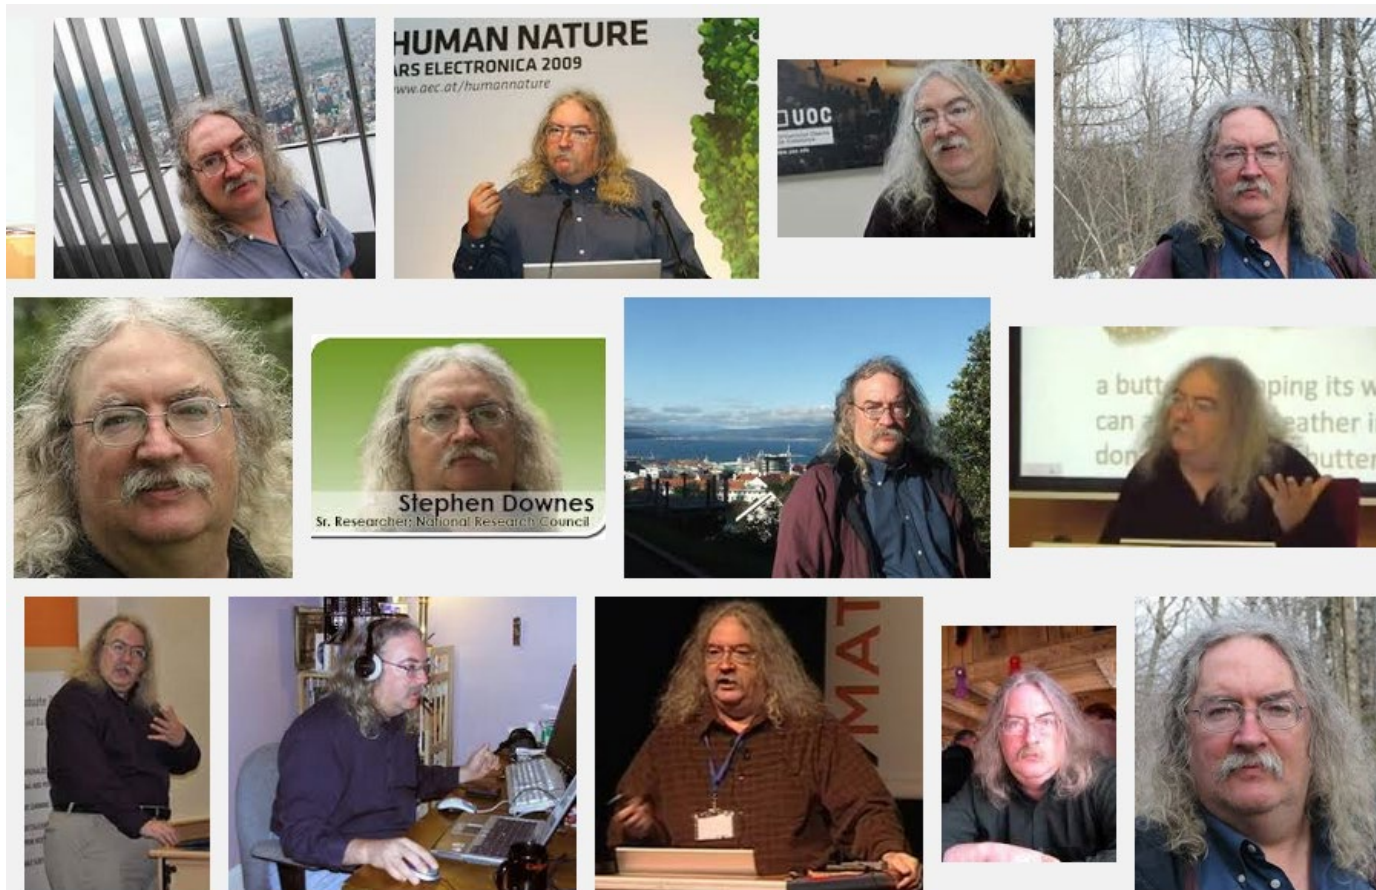

Connective technology transforming the workplace

The collaboration of the future: cooperation

The new skills are network skills

What is it we need when we say we need education?

New learning, new society
